

The Tall Oaks Technology Center is well positioned to provide any telecommunications service that a customer may need. Fiber Optic cabling (Verizon) is installed in the building. The facility is served by both copper and fiber optic wired facilities. For basic POTS and simple business lines including 10meg ADSL the building is served from a fiber fed Calix C7/OC48 remote switch site on the property and extended 700 feet to the building on copper facilities. For higher bandwidth services like T1 (1.5 meg) services, DS3 (45 meg) services and Ethernet there is a second fiber terminal Calix C7/OC12 inside the building.
